

SNMP ENUMERATION & ATTACK CHEATSHEET

1. COMMUNITY STRING DISCOVERY & ENUMERATION

<code>onesixtyone -c dict.txt 10.0.0.1</code>	Brute-force community strings across target host
<code>onesixtyone -c dict.txt -i hosts.txt</code>	Fast multi-host community string discovery
<code>snmp-check 10.0.0.1 -c public</code>	Automated system details & config enumeration
<code>hydra -P dict.txt 10.0.0.1 snmp</code>	SNMP community string brute-force with Hydra

2. STANDARD SNMP COMMANDS (NET-SNMP)

<code>snmpwalk -v2c -c public 10.0.0.1</code>	Walk full OID tree using SNMPv2c protocol
<code>snmpwalk -v2c -c public 10.0.0.1 .1</code>	Walk root OID tree starting from top level
<code>snmpget -v2c -c public 10.0.0.1 .1.3.6...</code>	Retrieve value for a specific exact OID
<code>snmpbulkwalk -v2c -c public 10.0.0.1</code>	High-speed bulk retrieval of large OID trees
<code>snmpset -v2c -c private 10.0.0.1 OID s val</code>	Write/modify value on a writable SNMP OID

3. HIGH-SPEED MASS QUERYING (BRAA)

<code>braa public@10.0.0.1:.1.3.6.1.2.1.1.*</code>	Query all System OIDs on target IP rapidly
<code>braa public@10.0.0.0/24:.1.3.6.1.2.1.1.1.0</code>	Query single OID (sysDescr) across /24 subnet
<code>braa private@10.0.0.1:.1.3.6.1.2...=s'val'</code>	Ultra-fast SNMP set request via braa

4. NMAP SNMP AUTOMATION SCRIPTS

<code>nmap -sU -p 161 --script snmp-brute target</code>	Discover valid community strings via Nmap
<code>nmap -sU -p 161 --script snmp-info target</code>	Extract basic system information & uptime
<code>nmap -sU -p 161 --script snmp-processes target</code>	Enumerate running processes via SNMP
<code>nmap -sU -p 161 --script snmp-interfaces target</code>	List network interface cards & IP configs
<code>nmap -sU -p 161 --script snmp-win32-users target</code>	Enumerate Windows domain/local user accounts

5. CRITICAL RECONNAISSANCE OID BRANCHES

<code>1.3.6.1.2.1.1 (sysDescr, sysName, uptime)</code>	System hardware, OS version, and uptime
<code>1.3.6.1.2.1.2 (ifDescr, ifPhysAddress)</code>	Network interfaces, MACs & IP configuration
<code>1.3.6.1.2.1.25.1 / 1.3.6.1.2.1.25.2</code>	System performance, RAM & storage metrics
<code>1.3.6.1.2.1.25.4.2.1.2 (hrSWRunName)</code>	Running system processes and executable paths
<code>1.3.6.1.2.1.25.6.3.1.2 (hrSWInstalledName)</code>	Installed software packages and patches
<code>1.3.6.1.4.1.77.1.2.25 (User Accounts)</code>	Windows local and domain user account list
